New isolated thermal tolerant avicelase polynucleotide useful for detection of a polynucleotide encoding AviIII and for reducing cellulose in a starting material, e.g. municipal solid waste.

Claim 16; SEQ ID NO 5; 29pp; English.

The The invention relates to an isolated polynucleotide molecule encoding a thermostable Avilli polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding Avilli. The polynucelotide is useful for reducing cellulose in a starting material which involves administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. The method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents the amino acid sequence of Acidothermus cellulolyticus avicelase Avilli CBD III #2. Indels

ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicellulose in a starting material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents ManA, a thermostable mannanase A polypeptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicallulose in a starting material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of ManA
                                                                                                                                                                                                                                                                                                                  Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.

Novel thermal tolerant GuxA polypeptide derived from Acidothermus cellulolyticus, useful for reducing cellulose in a starting material, and for the conversion of biomass to biofuels and biofuel additives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABP73023-28 represent peptide fragments of a GuxA polypeptide. GuxA is a thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biotuel production. GuxA is also useful in the conversion of biomass to biotuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA, or detecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                      Novel thermal tolerant GuxA polypeptide derived from Acidothermus cellulolyticus, useful for reducing cellulose in a starting material, and for the conversion of biomass to biofuels and biofuel additives.
                                                                                                                                                        The present sequence represents a GuxA polypeptide. GuxA is thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA, or detecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides
                                                                                                                                                                                                                                                                                                                                                                   584 VSGGLKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD 643

The present sequence is derived from a thermostable avicelase, designated AviIII. AviIII is a member of the glycoside hydrolase family of enzymes, and is a callulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in the processes. The thermostable AviIII peptide is useful in the degradation of cellulose, and in generating specific anti-AviIII antibodies that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polymucleotide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

         designated
The present sequence is derived from a thermostable avicelase, designated AviIII. AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in textile processes. The thermostable AviIII peptide is useful in the antibodies that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide tool for characterizing the molecular source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New thermostable AviIII peptide from Acidothermus cellulolyticus, useful for degradation of cellulose or in generating anti-AviIII antibodies for purifying recombinant AviIII polypeptides from genetically engineered host cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a thermostable avicelase polypeptide, designated AviIII. AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Avicelase, AviIII; glycoside hydrolase, enzyme; cellulase; biofuel; detergent; pulp processing; paper processing; feed processing; textile;

biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in textile processes. The thermostable AvilII peptide is useful in the degradation of cellulose, and in generating specific antipoptides from genetically engineered host cells, in detecting AvilII polypeptides from genetically engineered host cells, in detecting AvilII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AvilII polynucleotide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                            869 VSGGVKVQYKNNDSAPGDNQIKPGLQVVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD 928
                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated thermal tolerant avicelase polynucleotide useful for detection of a polynucleotide encoding AviIII and for reducing cellulose in a starting material, e.g. municipal solid waste.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polynucleotide molecule encoding thermostable AviII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucelotide is useful for reducing cellulose in a starting material which involves

The Gux1 exoglucanase is a member of the glycoside hydrolase family and comprises a catalytic domain GH48, carbohydrate binding domain type III, and a carbohydrate binding domain type III, and a carbohydrate binding domain type III. The polypeptide is useful in the degradation of cellulose into biofuel, or pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other cellulase or glycoside hydrolases. The novel polypeptide generates alternative cellulase enzymes capable of assisting in the commercial-scale processing of cellulase to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Gux1 cellulase CBD_III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 869 VSGGVKVQYKNNDSAPGDNQIKPGLQVVNTGSSSVDLSTVTVRYRFTRDGGSSTLVYVCD 928

                                                                                                                                                                                                                                                                                                                                                                                                                                        1 VSGGVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD
administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents the amino acid sequence of Acidothermus cellulolyticus avicelase AviIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ermal tolerant; exoglucanase; glycoside hydrolase; cellulose; detergent; pulp; paper processing; feed processing; textile;

Peptide Protein

Acidothermus cellulolyticus.

cellulase; enzyme.

/note= "encoded by CG"

Misc-difference

```
The invention relates to a thermal tolerant Gux1 peptide from A. cellulolyticus. The Gux1 excglucanase is a member of the glycoside hydrolase family and comprises a caralytic domain GH48, carbohydrate binding domain type III. and a carbohydrate binding domain type III. The polypeptide is useful in the degradation of cellulose into biofuel, or for conversion of biomass to biofuel additives. It is used in detergents, pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other cellulase or glycoside hydrolases. The novel polypeptide generates alternative cellulase enzymes capable of assisting in the commercial-scale processing of cellulose to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Gux1 cellulase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New thermal tolerant Guxl peptide having specified amino acid sequence, useful in the degradation of cellulose to biofuels.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Decker SR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence was deduced from the gene which was sequenced from plasmid, pAEC 1, prepd. by ligating chromosomal DNA contg. the gene (obtd. from Aeromonas) into put18. The protein has amol. wt. of 81,000 (SDS-PAGE) and an optimum pH near to 5 when carboxy—methylcellulose is the substrate. The N-terminal sequence: GIHADT—has been confirmed by Edman degradation. The gene can be used to produce recombinant enzyme which is used for the effective utilis—ation of biomass resources and the mfr. of pharmacceuticals and foodstuffs, and also for the deterrgent and deinking of waste paper. (Updated on 25-MAR-2003 to correct PA field.)

The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4/5, Cel E1/2, Cel 1/2/3, Cel 6 or Cel B3/B5, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B5 extends from amino acid A101 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid K335 to N1426 in the sequence shown in AAY1342; Cel E1 extends from amino acid K335 to N1426 in the sequence shown in AAY1342; Cel E1/2/3 and the stability region extends from amino acid V1233 to K1751 and the stability region extends from amino acid V1233 to K1751 and the stability region extends from amino acid V1233 to K1751 and the stability region extends from amino acid V1233 to K1751 and the stability region extends from amino acid V1233 to K1751 and the stability backstaining detergent compositions acid 6482 to G635 in the stabiling cotton-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewaching, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using nontruncated callulase compositions
New truncated cellulase proteins, useful in detergents and for producing 'stonewashed' denim.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

The present invention relates to a cellulase active protein, which is substantially free of proteinases of native thermophilic and alkalinophilic origin, where the cellulase active protein consists of the CelBS amino acid sequence. The cellulase active protein consists of treating cellulosic materials including cotton-containing fabrics, as improving the feel and/or appearance of cotton-containing fabrics, for removing surface fibers from cotton-containing kits or for imparting stonewashed appearance to cotton-containing denims. The present proteins are stable under condition of alkaline pH and elevated temperatures, thus suitable for textile processing and in commercial detergents. The present sequence is E3/B5 hybrid protein
                                                                                                                                                                                                                                                                Active cellulase protein; alkalinophilic; textile processing; proteinase; detergent additive; stonewashed appearance; cotton-containing denim; CelB5; thermophilic; commercial detergent; E3/B5 hybrid protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cellulase active protein, useful in textile processing or commercial detergents, e.g. for improving the feel or appearance of cotton-containing fabrics, is stable under conditions of alkaline pH and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bergquist P, Daniels R, Gibbs MD;

New isolated thermal tolerant avicelase polynucleotide useful for detection of a polynucleotide encoding AviIII and for reducing cellulose in a starting material, e.g. municipal solid waste.

Claim 16; SEQ ID NO 5; 29pp; English.

The The invention relates to an isolated polynucleotide molecule encoding a thermostable AviIII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucleotide is useful for reducing cellulose in a starting material which involves administering to the starting material, e.g. agricultural blomass or municipal solid waste, a polypeptide molecule of the polynucleotide. The method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents the amino acid sequence of Acidothermus cellulolyticus avicelase AviIII CBD III #2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a fragment of ManA, a thermostable mannanase A polypeptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicellulose in a starting material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents ManA, a thermostable mannanase A polypeptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicallulose in a starting material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and boffenels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful

ABP73023-28 represent peptide fragments of a GuxA polypeptide. GuxA is a thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA, catecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel thermal tolerant GuxA polypeptide derived from Acidothermus cellulolyticus, useful for reducing cellulose in a starting material, and for the conversion of biomass to biofuels and biofuel additives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

                                                                                                                              Novel thermal tolerant GuxA polypeptide derived from Acidothermus cellulolyticus, useful for reducing cellulose in a starting material, and for the conversion of biomass to biofuels and biofuel additives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               584 VSGGLKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWPTRDGGSSTLVYNCD 643
                                                                                                                                                                                                                         The present sequence represents a GuxA polypeptide. GuxA is thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA, or detecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New thermostable AviIII peptide from Acidothermus cellulolyticus, useful for degradation of cellulose or in generating anti-AviIII antibodies for purifying recombinant AviIII polypeptides from genetically engineered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                            designated
                                                                    Aviil: Aviili is a member of the glycoside hydrolase family of enzymes, and is a cellulase. Aviili is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and pare processing, food and feed processing and in textile processes. The thermostable Aviili peptide is useful in the degradation of cellulose, and in generating specific anti-Aviili antibodies that are useful in purifying recombinant Aviili polypeptides from genetically engineered host cells, in detecting Aviili polypeptide actions of the polypeptide. The Aviili polymertide actions of the polypeptide in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                                      9

The present sequence is derived from a thermostable avicelase, designated AviIII. AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in the termostable AviIII peptide is useful in the degradation of cellulose, and in generating specific anti-AviIII antibodies that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polymuclectide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New thermostable AviIII peptide from Acidothermus cellulolyticus, useful for degradation of cellulose or in generating anti-AviIII antibodies for purifying recombinant AviIII polypeptides from genetically engineered host cells.

ö
biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in textile processes. The thermostable AviIII peptide is useful in the degradation of cellulose, and in generating specific antipolypeptides that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polynucleotide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                869 VSGGVKVQYKNNDSAPGDNQIKPGLQVVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD 928
                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated thermal tolerant avicelase polynucleotide useful for detection of a polynucleotide encoding AviIII and for reducing cellulose in a starting material, e.g. municipal solid waste.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated polynucleotide molecule encoding thermostable AvilII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucelotide is useful for reducing cellulose in a starting material which involves

Peptide Protein

Acidothermus cellulolyticus.

cellulase; enzyme.

```
cellulase or glycoside hydrolases. The novel polypeptide generates alternative cellulase enzymes capable of assisting in the commercialscale processing of cellulose to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Guxi cellulase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a thermal tolerant Guxl peptide from A. cellulolyticus. The Guxl exoglucanase is a member of the glycoside hydrolase family and comprises a catalytic domain GH48, carbohydrate binding domain type III, and a carbohydrate binding domain type III. The polypeptide is useful in the degradation of cellulose into biofuel, or for conversion of biomass to biofuel additives. It is used in detergents, pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New thermal tolerant Guxl peptide having specified amino acid sequence, useful in the degradation of cellulose to biofuels.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Decker SR;

```

cellulolyticus. The Guxi exoglucanse is a member of the glycoside hydrolase family and comprises a catalytic domain GH48, carbohydrate binding domain type III, and a carbohydrate binding domain type III, and a carbohydrate binding domain type III. The polypeptide is useful in the degradation of callulose into biotuel, or for conversion of biomass to biofuel additives. It is used in detergents, pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other callulase or glycoside hydrolases. The novel polypeptide generates alternative callulase enzymes capable of assisting in the commercial-scale processing of callulose to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Guxl cellulase CBD_III

Sequence 153 AA; domain fragment

New thermal tolerant Guxl peptide having specified amino acid sequence, useful in the degradation of cellulose to biofuels.

invention relates to a thermal tolerant Guxl peptide from A.

The protein has amol. wt. of 81,000 (SDS-PAGE) and an optimum pH near to 5 when carboxy—exthylcellulose is the substrate. The N-terminal sequence: GIHADT- has been confirmed by Edman degradation. The gene can be used to produce recombinant enzyme which is used for the effective utilis ation of biomass resources and the mfr. of pharmacceuticals and foodstuffs, and also for the detergent and deinking of waste paper. (Updated on 25-MAR-2003 to correct PA field.)

The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel BS, Cel B4/5, Cel B1/2, Cel 1/2/3, Cel 6 or Cel B3/B5, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid A39 to D481, Cel E1/2 extends from y39 to G812, Cel E1 E1/2 extends from y39 to G812, Cel E6 extends from y39 to G812, Cel E7 E7 E8 extends from mino acid V1233 to K1751 and the stability region extends from amino acid V1233 to K1751 and the stability region extends from amino acid G812 to G815 in the sequence shown in AAY13493. Cel E3/B5 is shown in AAY13494. The new carymes are useful in laundry detergent compositions to prevent or remove staining, backstaining or graying, for use on cellulosic materials including cotton-containing fabrics. They are especially useful for proventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-

```
substantially free of proteiness of critics and alkalinophilic and alkalinophilic origin, where the collulase active protein consists of the CelBs amino acid sequence. The collulase active protein is useful for treating cellulosic materials including cotton-containing fabrics, as detergent additives. The cellulase active protein is also useful for improving the feel and/or appearance of cotton-containing fabrics, for removing surface fibers from cotton-containing materials, for stonewashed appearance to cotton-containing whits or for imparting stonewashed appearance to cotton-containing denims. The present proteins surface textile processing and in commercial detergents. The present sequence is B3/Bs hybrid protein
                                                                                                                      Active cellulase protein; alkalinophilic; textile processing; proteinase; detergent additive; stonewashed appearance; cotton-containing denim; CelB5; thermophilic; commercial detergent; E3/B5 hybrid protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New cellulase active protein, useful in textile processing or commercial detergents, e.g. for improving the feel or appearance of cotton-containing fabrics, is stable under conditions of alkaline pH and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a cellulase active protein, which is
                                                                                                                                                                                                                                                                                                                                                                                                                   Bergquist P, Daniels R, Gibbs MD;
                                                                                  Active cellulase hybrid protein, E3/B5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Col 75-78; 61pp; English.

                                                                                                                                                                                                                                           Carboniase (EC 3.2.1.4) precursor - Bacillus subtilis (strain BSEG16)

N;Alternate names: endo-1,4-beta-glucanase
C;Species: Bacillus subtilis
C;Species: Bacillus subtilis
C;Species: Bacillus subtilis
C;Accession: JN0111

R;Park, S.H.; Kim, H.K.; Pack, M.Y.
Agric. Biol. Chem. 55, 441-448, 1991
A;Title: Characterization and structure of the cellulase gene of Bacillus subtilis BSEG1
A;Title: Characterization and structure of pmD:1368694
A;Reference number: JN0111; MUD:91299280; PMID:1368694
A;Reference number: JN0111
A;Molecule type: DNA
A;Residues: 1-499 cpAR>
A;Residues: 1-499 cpAR>
A;Residues: Translated the codon ATA for residue 102 as Tyr
C;Comment: The low molecular weight of the mature protein suggests carboxyl-terminal prc
C;Function:
A;Mosciption: hydrolysis of 1,4-beta-D-glucosidic linkages in beta-D-glucans such as ce
A;Bethway: cellulose degradation
C;Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
C;Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide egradation
F;1-29/Domain: signal sequence #status predicted cSIG>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Molecule type: nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antonie Van Leeuwenhoek 66:319-326(1994).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic
linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- SIMILARITY: Belongs to cellulase family A (family 5 of glycosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=95225655; PubMed=7710279;
Aa K., Flengsrud R., Lindahl V., Tronsmo A.;
Characterization of production and enzyme properties of an endo-beta-1,4-glucanase from Bacillus subtilis CK-2 isolated from compost soil.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (BY SIMILARITY).

SIMILARITY: IN THE N-TERMINAL SECTION, BELONGS TO CELLULASE FAMILY
A (FAMILY 5 OF GLYCOSYL HYDROLASES).
SIMILARITY: IN THE C-TERMINAL SECTION, BELONGS TO CELLULASE FAMILY
J (FAMILY 44 OF GLYCOSYL HYDROLASES).
                                                                                                                                                galactoglucomannans.
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic
linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- MISCELLANEOUS: This enzyme is most active at pH 6 and 80 degrees
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1; Gaps

J. Gen. Microbiol. 138:307-316(1933).
-!- FUNCTION: THIS ENZYME CATALYZES THE ENDOHYDROLYSIS OF 1,4-BETA-GLUCOSIDIC LINKAGES IN CELLULOSE, LICHENIN AND CEREAL BETA-GLUCOSIDIC LINKAGES IN CELLULOSE, LICHENIN AND CEREAL BETA-D-GLUCANS. PRINCIPALLY ACTIVE AGAINST BARLEY BETA-GLUCAN.
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucosis.
-!- PATHWAY: Cellulose degradation.
-!- SIMILARITY: Belongs to cellulase family E (family 9 of glycosylhydrolases).
                                                                                                                                                                                                                                                                                                                                                                  Bacteria; Firmicutes, Clostridia, Clostridiales, Clostridiaceae,
Clostridium.

ERMS Microbiol. Lett. 78:181-186(1992).

-!- FUNCTION: ACTS AS A SCAFFOLDING PROTEIN IN THE CELLULOSOME. IT PROMOTES BINDING OF CELLULOSE TO THE CATALYTIC DOMAINS OF THE CELLULOLICSE TO THE CATALYTIC DOMAINS OF THE CELLULOSOME.

CELLULOLYTIC ENZYWES PROBABLY THROUGH THE BINDING OF THE NINE REPEATED DOMAINS WITH THE DUPLICATED SEGMENT OF 24 AMINO ACIDS PRESENT IN CATALYTIC SUBUNITS OF THE CELLULOSOME.

-!- SUBCELLULAR LOCATION: Cell surface.

-!- DOMAIN: THE COMPONENTS OF THE CELLULOSOME.

-!- DOMAIN: THE COMPONENTS OF THE CELLULOSOME.

-!- SIMILARITY: Contains at least 3 cohesin domains.

"The crystal structure of a type I cohesin domain at 1.7-A resolution.";
J. Mol. Biol. 273:701-713(1997)

- FUNCTION: ACTS AS A SCAFFOLDING PROTEIN IN THE CELLULOSOME. IT PROMOTES BINDING OF CELLULOSE TO THE CATALYTIC DOMAINS OF THE CELLULOLYTIC ENZYMES.

- SUBCELLULAR LOCATION: Cell surface.
- SUBCELLULAR LOCATION: Cell surface.
- DOMAIN: THE COHESIN DOMAINS BIND TO THE DOCKERIN DOMAIN BORN BY THE CATALYTIC COMPONENTS OF THE CELLULOSOME.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    R InterPro; IPR002102; Cohesin.

Endoglucanase V1 precursor (EC 3.2.1.4) (Endo-1,4-beta-glucanase V1)
(Cellulase V1).
                                                                                                                                                     MOI. Gen. Genet. 241:341-350(1993).
-!- FUNCTION: Endoglucanase with some exoglucanase activity.
-!- FUNCTION: Endoglucanase with some exoglucanase activity.
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic
!INKages in CATIVITY: Secreted.
-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANBOUS: Has a pH optimum of about 7.0 and a temperature optimum about 42 degrees Celsius.
-!- SIMILARITY: Belongs to cellulase family A (family 5 of glycosyl
                                                                                                                                carotovora: evidence for an evolutionary 'mix-and-match' of enzyme

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 22,
